Product Name: BRUSH ON ACTIVATOR
Part Number: 4020007 - 4020009, 4020076

Product Description

Brush on Activator is used to increase the speed of cure of glues. It can be used with all resin, glue, and fiberglass systems. This brush on technique is similar to traditional spray activators but has a slower cure rate, allowing a more consistent finish of the final product. Can also be used as a dropper application.

Instructions for Use

Brush on Application: Apply glue or wrap system as directed. To final glue layer, gently brush on a thin, equal layer of Brush On Activator to the entire surface of the glue. Allow it to cure for approximately 3 minutes. **Note:** When applying, do not press the brush too hard into the glue, or brush marks will be visible on cured final product.

Dropper Application: Apply glue or wrap system as directed. To final glue layer, use a dropper and apply one drop of Brush On Activator to each nail. Allow the product to spread over the nail surface and let cure for approximately 3 minutes.

Warnings/Disclaimers

Do not expose to excessive heat or light. Use only as directed.

Packaging Notes

Package in bottle with a brush applicator or dropper. Keep sealed in an air-tight container.
